

## Mother's Day Show & Sale

May 11th & 12th 9:30 a.m.—4:30 p.m.  
Fairchild Tropical Botanic Garden  
10901 Old Cutler Rd., Coral Gables, FL 33156

Join TFTS for the annual Mother's Day Plant Sale! With the largest selection of tropical flowering trees, vines, shrubs, butterfly plants, and more. Experts on hand to answer an array of plant related questions, as well as educational content.

Mark your calendars for May 11th and 12th!

## Featured Plants

In this letter are this year's featured plants. These are some of our member's favorite plants and most are highly underutilized in the Miami area.

This letter is to take the place of mailed catalogs (if requested, one can be printed for you). Digital versions are available to all members at [www.tfts.org/catalog](http://www.tfts.org/catalog) in an ongoing effort to reduce costs for the society.

Also listed on the second page of this letter is the complete list of plants available.\* (Plants available on a first come first serve basis and are subject to limited quantities).

**If you are able to volunteer at any point during the weekend, please send us an email at [tftsmiami@yahoo.com](mailto:tftsmiami@yahoo.com)**

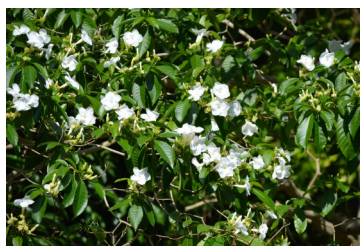

□ **Comretum constrictum**— *Combretaceae*—native to Tropical Africa, this plant is commonly called the Thai Powderpuff or Red Bush

Willow. When the plant is established, it can bloom on and off throughout the year, and can be grown as a large shrub or small tree. Attractive to bees, butterflies, and hummingbirds. Can be grown in zone 9-11.

□ **Gardenia tubifera**— *Rubiaceae*—A true Gardenia species that will perform exceptionally well in South Florida. Tolerant of the alkaline

conditions in the Miami areas, this plant tolerates many conditions. It can be grown in full sun or mostly shade, without affecting the blooming habits. This Gardenia blooms on and off throughout the year. Fragrant during the day, and even more so at night. This species can grow over 15+ feet and makes a lovely small tree or large shrub. Flowers open pure white in the evening and darken to orange with age, giving 3 colors at a time.

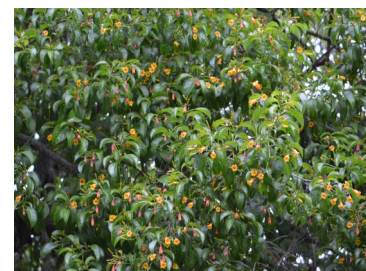

□ **Tabernaemontana (Stemmadenia) littoralis**— *Apocynaceae*

Milky Way or Lecheso Tree—From tropical America, is a small, evergreen tree growing from 15' - 25'. It has fragrant white flowers all year, heaviest in the spring. The tree is an excellent selection for an entrance or driveway. It is cold hardy to the 30's and can be grown in full sun to partial shade. Highly salt tolerant.

□ **Portlandia grandiflora**— *Rubiaceae*—Portlandia grandiflora is a native to Jamaica and Cuba where it naturally is found growing in limestone areas. It's a highly underutilized plant for South Florida, as it performs wonderfully here with little to

no effort at all. One of the few plants that seems to thrive on alkaline conditions. Flowers can be seen throughout the year, and almost constantly on mature specimens. A light chocolate like fragrance is produced by the pure white flowers, and they can tolerate full shade to mostly full sun.

□ **Hamelia cuprea**— *Rubiaceae*—native to Jamaica, Cuba, Haiti, and the Cayman Islands, but is commonly called the Bahama Firebush.

This very ornamental, small, tree has bell-shaped yellow flowers, turning reddish orange with age. Bees enjoy the flowers as well as the occasional hummingbirds and butterflies.

□ **Brownea macrophylla**— *Fabaceae* (*Caesalpinaceae*) — Rose of Venezuela, Panama Flame Tree—A small- to medium-sized tree with very large 9" diameter

flowers in a bright red with yellow tips. A real show-stopper in the garden. New leaves are in a pinkish droop that eventually stiffen, turn lime green and then a dark green. Naturally an understory tree, but can be acclimated to full sun.

**Plants Available for TFTS Mother's Day Plant Sale—May 11th & 12th, 2019**
